EXPERIENCE — FULL STACK ENGINEER (NODE.JS) AT LAST CALL MEDIA

Leadership

- Led full stack development of a data orchestration platform using Node.js for the backend and React for the frontend, delivering scalable JavaScript APIs and a modern UI.
- Led frontend architecture decisions by establishing a React component library and coding standards, improving JavaScript code consistency across teams.

Impact

- Delivered full stack features for enterprise clients with Node.js backend services and React front end components, emphasizing clean JavaScript code and API integration.

Technical

- Built and consumed internal REST APIs across a distributed microservice architecture, ensuring reliable JavaScript/Node.js communication between services.
- Administered PostgreSQL databases, wrote complex SQL queries and migrations, and optimized relational data performance for high load JavaScript applications.
- Maintained a production Turborepo monorepo containing three Next.js apps and shared TypeScript packages, streamlining JavaScript/TypeScript builds and deployments.
- Designed and implemented REST APIs for internal tooling and external partners, enforcing JSON:API standards and facilitating JavaScript client consumption.
